PROFESSIONAL SUMMARY

- Computer Science graduate and Software Developer proficient in React.js, Node.js, Express.js, TypeScript, Python (Flask, FastAPI, Django), and RESTful API development.
- Experienced in full-stack web application development, database design (PostgreSQL, MongoDB, Redis), cloud deployment (AWS, Vercel, Render), containerization (Docker), and JWT-based authentication.
- Built and deployed 3+ production-grade applications, including a full-stack quality intelligence dashboard with role-scoped REST APIs and data visualization, and an LLM-integrated pipeline automating end-to-end regulatory report generation-combining strong analytical and problem-solving skills with hands-on AI/ML system design

PROFESSIONAL EXPERIENCE

Full Stack Developer Intern, CodeAlpha

07/2026 – 09/2026 | Lucknow, India

- Architected and deployed 4 full-stack web applications -E-commerce, Social Media, Project Management, and Real-Time Communication — using React.js, Node.js, Express.js, MongoDB, REST API
- Built an E-commerce platform with product catalogs, shopping cart, order processing, and secure JWT authentication backed by MongoDB.
- Developed Social Media and Project Management applications with profiles, feeds, posts, comments, Kanban task boards, team collaboration, and real-time updates using WebSockets.
- Delivered end-to-end SDLC ownership covering database design, backend APIs, responsive frontend development, authentication/authorization, testing, deployment, and Git/GitHub documentation.

Tech: React.js, JavaScript, Node.js, Express.js, MongoDB, REST APIs, JWT, WebSockets, Socket.io, Database Design, Git

Full Stack Developer Intern, UpStartInterns

Remote

- Built responsive, mobile-first web interfaces using HTML5, CSS3, Flexbox, and CSS Grid with cross-device compatibility.
- Developed RESTful APIs using Node.js and Express.js with CRUD operations, JSON handling, HTTP status codes, and error handling.
- Engineered full-stack CRUD applications integrating frontend, REST APIs, database schema design, validation, and persistent data storage.
- Built and deployed an authenticated web application with bcrypt password hashing, token/session-based authentication, user-scoped data access, cloud deployment, and GitHub documentation.

Tech: HTML5, CSS3, JavaScript, Node.js, Express.js, REST APIs, CRUD, Authentication, bcrypt, Database Design, Git, Cloud Deployment.

TECHNICAL SKILLS

Languages

Python, JavaScript, Java, SQL, HTML, CSS

Databases & DevOps

MongoDB, PostgreSQL, Redis, Git, Docker, AWS, GitHub Actions (CI/CD)

Frontend / Backend

React.js, Redux Toolkit, TypeScript, Recharts, Tailwind CSS, Node.js, Express.js, Flask, FastAPI, Django, REST APIs, JWT

AI / ML & Tools

LightGBM, OpenCV, Hugging Face, LangGraph, Postman, Sentence Transformers, Joblib, Figma

EDUCATION

Bachelor of Engineering in Computer Science and Engineering CGPA: 7.0/10, Coimbatore Institute of Technology

2023 – 05/2026

Diploma in Computer Science 95.5%, Sri Rengaswarar Polytechnic College, Namakkal

2020 – 2023

Higher Secondary School 65%, Govt. Boys Higher Secondary School, Trichy

2018 – 2020

CERTIFICATIONS

AIML Engineer

Project Development Cell, Coimbatore-2024

Build Sprint

Latent Force - 2026

Frontier Engineering Challenge

Micro 1

PROJECTS

AI Agent Workflow Builder

AI Agents • Workflow Automation • Groq API • Next.js • TypeScript • Node.js • Express • PostgreSQL • Webhooks • REST APIs

- Engineered an n8n-style visual workflow automation platform with 6 node types (LLM, HTTP, database, conditional, notification, approval).
- Implemented 4 trigger types (manual, webhook, scheduled, database-event) with real-time execution status tracking.
- Designed RBAC using Nhost Auth and Hasura, including organization management and approval-based workflow pause/resume.
- Integrated Groq API for real-time LLM execution on a modular Node.js/Express backend with PostgreSQL and GraphQL.

DevPilot AI-Autonomous Software Engineer

React, TypeScript, FastAPI, Node.js, Gemini API, PostgreSQL, Docker

- Developed an autonomous multi-agent AI platform that transforms natural-language requirements into full-stack applications (frontend, backend, database) via a 7-stage agentic pipeline (Requirement → Architecture → Code Generation → Test → Debug → Fix → Review).

- Implemented a self-healing test-fix-retest loop, enabling AI agents to autonomously detect failures, perform root-cause debugging, and repair code.
- Integrated Gemini API for multi-agent orchestration across a Node.js AI engine, FastAPI backend, and React/TypeScript frontend.
- Tested and containerized the full multi-service application (frontend, backend, AI engine) using Docker and Docker Compose, ensuring reproducible deployment.
